

Patient Access's Calculator of Choice for Accurate Patient Estimates

What's the surest path to more upfront collections? Recondo's SurePayHeath™. It's the automated patient estimate intelligence feed that produces reliably correct patient estimates prior to or at the point of service. And it's driving up cash collections for hundreds of hospitals around the country—for many, by as much as 40 percent.

SurePayHeath Benefits:

- **Replaces unreliable manual estimates with accurate calculations of a patient's financial responsibility.** Using Recondo's patented ReconBot™ technology, SurePayHeath automatically retrieves and combines data from payer portals and charge master data to present an estimate based on the most current information available on patient coverage.
- **Checks if financial assistance is available for self-pay patients.** SurePayHeath aids in the financial clearance process of determining propensity to pay or charity qualification, without requiring an intrusive credit check.
- **Performs retrospective accuracy analysis by patient type and service.** SurePayHeath is the most intelligent patient estimate services on the market. It even evaluates patient estimates against previously adjudicated claims to identify variances—significantly decreasing likelihood of refunds and supplemental bills.
- **Integration of payment posting files.** Optional feature supports detailed reporting on actual collections relative to total opportunity.
- **Global estimates available.** Optional feature to include both the facility and professional charges.
- **Seamless patient estimation experience.** SurePayHeath easily works within major systems like Epic, turning basic patient estimation features into dynamic, accurate intelligence on the patient's true financial responsibility.

How Recondo Intelligence Makes Revenue Cycle Management Smarter

Hospital information systems are good at managing patient data. But imagine a system that can also automatically retrieve a patient's complete benefit detail and give valuable insight into denial risk. Or show authorization status on every procedure. Those are just some of the tasks that Recondo intelligence feeds can automate within widely used HIS and Revenue Cycle workflow systems, including:

- Epic
- McKesson
- Meditech
- Cerner
- Allscripts
- Artiva

Meet the Bot that AUTOMATES AUTHORIZATION MANAGEMENT.

It's highly intelligent. It never stops working. Recondo's ReconBot technology breaks records and chains for Patient Access departments trapped in a mire of spreadsheets and constantly changing payer requirements. ReconBots take the revenue cycle to the next level by automatically gathering the latest information from payer websites and hospital information systems to present complete and coherent answers on the patient's financial responsibility.

Proprietary Intelligence

- Credentialed access to 300+ payer portals in states across the country to retrieve current contract rates and real-time patient benefit accumulators
- Financial assistance feature that aids in the financial clearance process of determining propensity to pay or charity qualification
- Auto-generated patient estimations, providing ongoing accuracy analysis and financial assistance support

Unmatched Technology

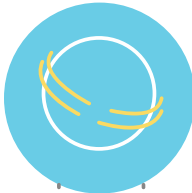

- Retrieves patient eligibility answers in seconds—more than manual efforts could obtain in a year
- Scales to accommodate large health system needs
- Easily integrates with most major HIS and Revenue Cycle systems
- Queries and retrieves data from multiple sources to bring back complete answers

Proven Experience

- A portfolio of recognized and referenceable customers
- More experience obtaining patient estimates than any other vendor
- Revenue cycle management solutions in active use at 900+ hospitals around the country

MONITOR

Continuous watch on hundreds of payer websites for answers

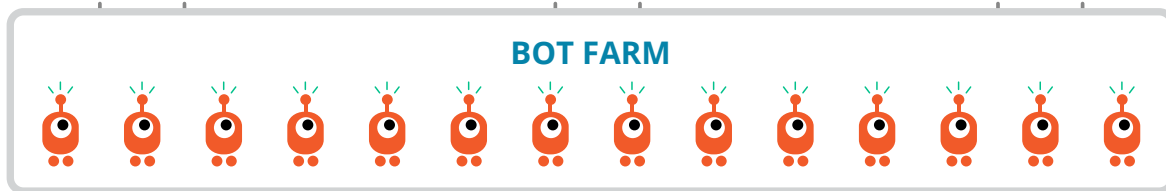

RETRIEVE

Identifies and grabs the right data

DISTRIBUTE
